

Papaya Enzyme Cleanser

Energizing facial cleanser for naturally vibrant skin.

primary benefits

This energizing cleanser contains a unique enzyme and Salicylic Acid which leave the skin smooth by lifting away make-up and impurities and removing dead surface cells. Pores are refined and skin is more vibrant.

points of difference

Contains an extract from the Papaya Fruit, native to Mexico and South America, which nourishes the skin with vitamins and minerals. This Papaya extract contains papain, an enzyme which helps break down proteins and exfoliate the skin. Papaya Enzyme Cleanser also contains Bixa Orellana Seed Extract which is high in antioxidants and has soothing properties. Salicylic Acid also mildly exfoliates the skin for a smoother complexion.

who benefits

All skin types, especially normal/combo skin.

how to use

Dispense a nickel-sized amount into palm of hand. Rub hands together and massage onto face using circular motions. Avoid eye area. Rinse thoroughly and pat dry. Use twice daily.

Papaya Enzyme Cleanser

Energizing facial cleanser for naturally vibrant skin.

1 What skin types should use this cleanser?

Papaya Enzyme Cleanser can be used by most skin types, including normal, mature, combination and oily skin. It should not be used to remove eye makeup.

2 What are enzymes? Enzymes constitute a diverse and very large family of biological compounds.

Enzymes play an important role in many life-sustaining chemical reactions that occur in the human body. Proteases are a specific type of enzyme which work to break down and digest proteins. Protease enzymes, such as papain, are used in skincare to help break down old, dead skin cells on the surface of the skin.

3 Which enzyme is in Papaya Enzyme Cleanser?

Papaya Enzyme Cleanser contains papain, a very stable enzyme extracted from the Papaya Fruit. Papain works on the surface of the skin, dissolving and removing surface skin cells.

4 Are there other ingredients in the Papaya Enzyme Cleanser that help to exfoliate the skin?

Yes, Salicylic Acid, a beta-hydroxy acid, also helps to exfoliate the skin. Salicylic Acid is keratolytic meaning it helps break down dead keratin protein on the surface of the skin.

5 Why is it important to use a cleanser with exfoliants?

Our skin has a reduced ability to naturally shed dead skin cells as we age. Exfoliants remove dead, dehydrated cells from the surface of the skin to help the skin appear brighter and more radiant.

6 How long will it take to see results?

Results should be seen in 6 - 12 weeks with twice daily use. Results may vary.

7 Does Papaya Enzyme Cleanser contain artificial color?

No, Papaya Enzyme Cleanser does not contain artificial color. Bixa Orellana Seed Extract adds the natural orange color to the Papaya Enzyme Cleanser. Contained in the natural orange color are high amounts of antioxidants to soothe and condition the skin.
