

# Revox™ 7

## Peptide-rich serum for expression lines

### primary benefits

Peptide-rich serum reduces the appearance of wrinkles caused by repeated facial movements. Softens the look of seven types of expression lines including forehead lines, crow's feet, glabella frown lines, bunny nose lines, nasolabial laugh lines, lip lines and marionette lines.

### points of difference

Clinical levels of seven of the most effective peptides provide both immediate and long-term benefits for facial wrinkles. In a clinical study\*, after 12 weeks of use, Revox™ 7 was shown to have a statistically significant reduction in the appearance of expression lines around the eyes. Contains four peptides that work in tandem to inhibit acetylcholine release and to reduce the intensity of expression lines. A blend of three different peptides helps to support Collagen synthesis, strengthen the extracellular matrix, reduce MMP's, and increase communication between cells. Gamma-Aminobutyric Acid (GABA) has a tangible relaxing effect on the skin. \*n=29. Data on file. Results may vary.

### who benefits

All skin types. Anyone interested in reducing the appearance of wrinkles caused by repeated facial movements.

### how to use

Apply to targeted areas after cleansing and toning. Dispense one pump and dab on expression lines. Avoid direct eye contact. Wait one minute before applying moisturizer. Use twice daily.

**1** What does the "7" in Revox™ 7 mean? The number "7" represents the seven peptides that soften the appearance of seven types of expression lines.

**2** What are the seven different peptides in Revox™ 7? There are four peptides that work in tandem to inhibit acetylcholine release and to reduce the intensity of expression lines. These are Palmitoyl Hexapeptide-19, Acetyl Hexapeptide-8, Acetyl Octapeptide-3, and Dipeptide Diaminobutyroyl Benzylamide Diacetate. There are three peptides that help to support Collagen synthesis, strengthen the extra-cellular matrix, reduce MMPs, and increase communication between cells. These are Palmitoyl Tripeptide-28, Trifluoroacetyl Tripeptide-2, and Palmitoyl Tetrapeptide-7.

**3** How do the peptides in this product work? We use more than 20 muscles while communicating, both through speech and facial expressions. The peptides in Revox™ 7 address the repeated movement that leads to facial wrinkles. The different peptides in the product provide different benefits. Some help to relax the muscles that cause expression lines and other peptides help stimulate the production of Collagen and help the skin appear more firm.

**4** When can I expect to see results? Revox™ 7 was shown to reduce the appearance of fine lines around the eyes after 12 weeks of use.

**5** How does this product compare to injectable neurotoxins? Injectable neurotoxins are drug products that are injected into the muscles of the face to minimize the appearance of deeper wrinkles and lines. Revox™ 7 is a topical age-defying serum that can be used to refine in-office professional results.

**6** How is this product different from Revox™ II? Revox™ 7 contains the newest peptide technology, including two award-winning peptides. The new peptides found in Revox™ 7 are at high clinical levels and include Palmitoyl Tripeptide-28, Trifluoroacetyl Tripeptide-2 and Palmitoyl Hexapeptide-19. The peptides in the formula address seven different areas of expression lines through multiple pathways.

**7** I felt a slight tingling sensation when I applied the product. Is that normal? What causes it? A slight tingling felt by some upon application is normal. Gamma-Aminobutyric Acid (GABA) causes the tingling effect as it relaxes. Some users may not feel the tingling as it is very slight and dissipates quickly. If you don't experience a tingling sensation, it does not mean the product is not working.

**8** Where do I apply this product? Gently dab onto the seven areas of expression lines including: forehead lines, crow's feet, glabella frown lines, bunny nose lines, nasolabial laugh lines, lip lines and marionette lines.
